In this we make sure to name it JCLLAB2 at the top. INPUT1 and INPUT2 creates the input for the two datasets. The copy statement on the bottom copies the members from both of the datasets into a new one.

This is the merged data set.

Out of the two projects I would say this one is the easiest. Since doing the all star badge I was a little more familiar with this. I did have some difficulty with the formatting since it was in the terminal though. Also the date part was a little difficult but I was able to get it working.
