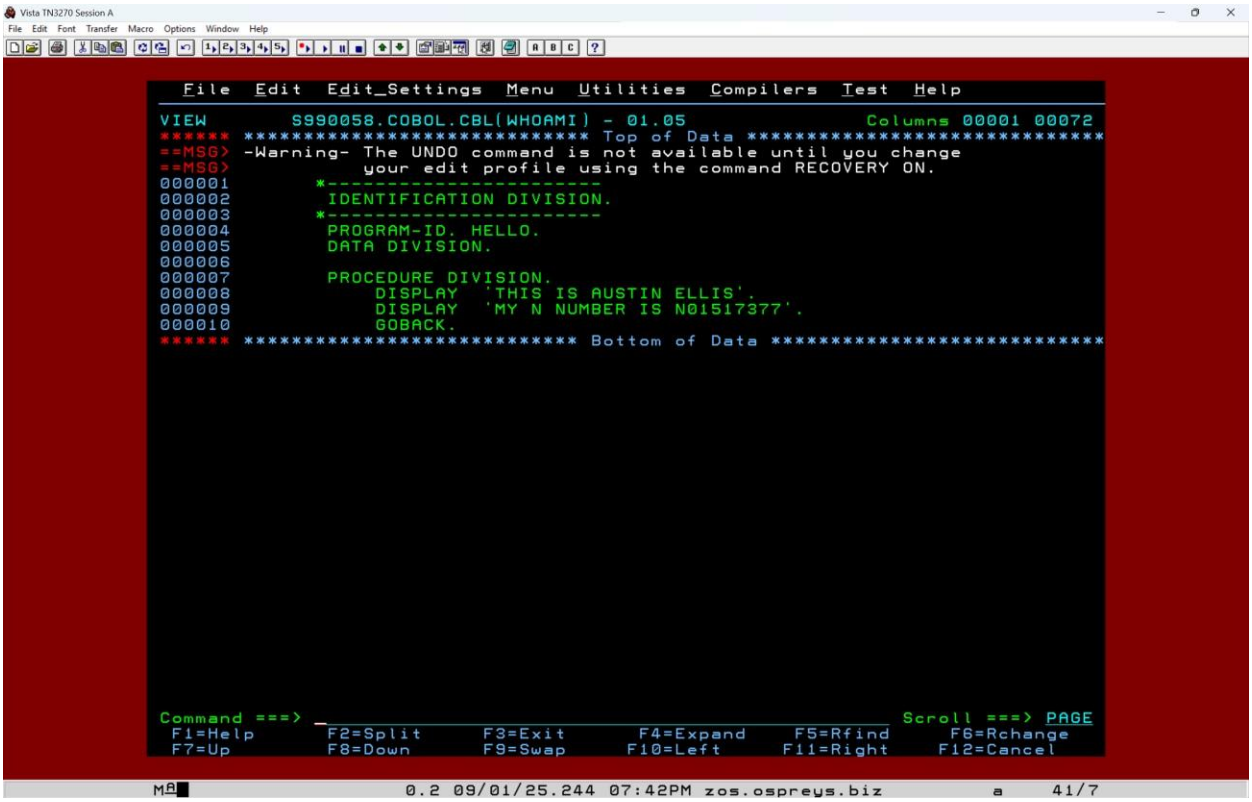
Austin Ellis Project 1

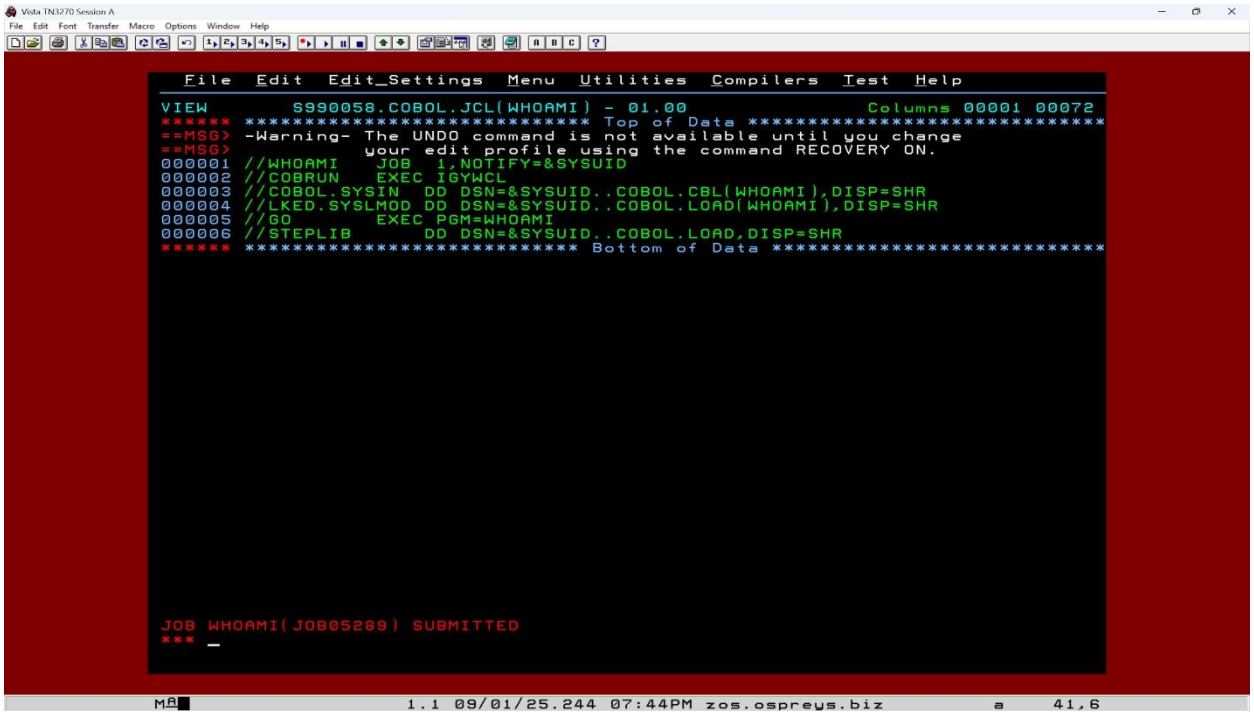
Step 1: Modifying the WHOAMI COBOL Program

After logging into the mainframe with your credentials, I input option 3.4 which goes to utilities then in the utilities menu goes to the dslist option. Once I see the list of datasets, I navigate to the the S990058.COBOL.CBL dataset and I type ‘e’ next to the name to indicate I want to edit the dataset. Within there I go to the WHOAMI member and I type e next to that to edit the WHOAMI member. Once in the program I edit the program to include my name and my N Number.



Step 2: Submit the JCL

After editing the WHOAMI member I navigate to S990058.COBOL.JCL and you an just type v to view the members. Once I see the WHOAMI in the JCL I type v next to it and once I’m in the JCL I can type “submit” without the quotes in the command section and the job will submit.



Step 3: Compiler Output

Once you have successfully submitted the JCL you navigate to the ISPF option menu and type sd to get into the System Display and Search Facility and once in there type st to navigate to status of jobs. Once you type that, type s next to the WHOAMI program listed in the jobs and once you are in there you should see the compiler output listed below.

```

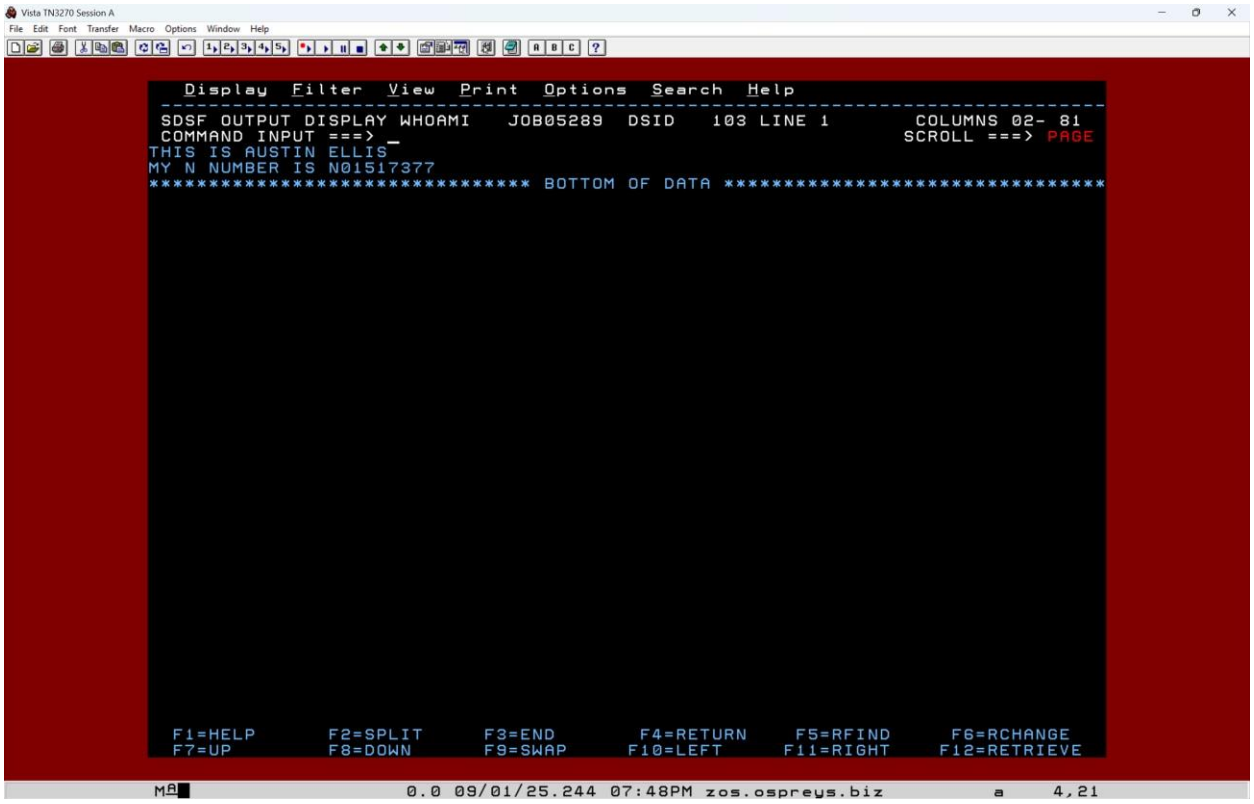
Step 4: Batch Output

Within the step 3 navigate to the bottom of the compiler’s output and you can see at the verry bottom the output from the WHOAMI.



Summary: Overall, I think the project is a solid introduction into navigation of the emulator. It was a little daunting at first, but I slowly got the hang of it as I continued to. Personally, for me what really strived my understanding for all of this was the IBM Z Xplore. The IBM Z Xplore goes over these exact problems and solutions in their certifications and once I did both those in VS Code and the emulator it made the project a lot easier to understand. I would say next year emphasize as much as possible to do the JCL1 and the Emulator challenges in IBM either before or during this project because those two paired gave a lot of clarity. Also doing it with classmates is way better than doing it by yourself because there is always someone out there who you can lean on for some help if you need it.
